Application/Control Number: 10/661,790

Art Unit: 1641

## **DETAILED ACTION**

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - 1. Claims 1-25, 34-36, and 40, drawn to a method for assaying an interaction between a test agent and a lipid bilayer-associated component comprising a surface detector array device, classified in class 422, subclass 82.02.
  - II. Claims 26-33, 37-39, and 41, drawn to a method for assaying an interaction between a test agent and a lipid bilayer-associated component, classified in class 436, subclass 71.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are independent and patentably distinct. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are independent and patentably distinct methods that differ with respect to one or more of ingredients, method steps, and/or endpoints; therefore, each method is patentably distinct.

Furthermore, the distinct ingredients, method steps, and/or endpoints require separate and distinct searches. As such, it would be burdensome to search these inventions together.

Application/Control Number: 10/661,790

Art Unit: 1641

Group I is drawn to a method that includes the step of providing a surface detector array device comprising a substrate, which is not a limitation of Group II. Group II is drawn to a method that includes the step of evaluating the membrane fluidity of a provided lipid bilayer expanse, which is not a limitation of Group I.

- 3. Because these inventions are distinct for the reasons given above, have acquired a separate status in the art because of their recognized divergent subject matter and as shown by their different classification, and the searches required for one group are not required for the others, restriction for examination purposes as indicated is proper.
- 4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christine Foster whose telephone number is (571) 272-8786. The examiner can normally be reached on M-F 8:30-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le can be reached at (571) 272-0823. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
